

# Plotting

It's quite difficult - practically impossible - to perceive data from rows and columns with numerical data. This holds true for complex (scientific) data; but also for much simpler data, e.g. temperature records over time. Graphical plots allow fast perception. That makes plots very important - also for debugging while development.

## Plot Types

There are many plot types, you can select from. See <https://datavizcatalogue.com/>

## Terminal / Command Line

[Gnuplot](#) is a portable command-line tool for creating plots.

Usually, comma separated value (CSV) files are used as input, see [comma separated values](#). But it's also possible to plot from binary data files.

## C++

Following plotting libraries might be used for creating (debug) plot files.

First some meta results, which already give a good overview:

- <https://gasparri.org/2019/12/06/best-plot-and-charting-c-packages-for-data-visualization/>
- [https://www.researchgate.net/post/What\\_are\\_the\\_best\\_plot\\_and\\_charting\\_C\\_package\\_which\\_can\\_be\\_used\\_for\\_data\\_visualization](https://www.researchgate.net/post/What_are_the_best_plot_and_charting_C_package_which_can_be_used_for_data_visualization)
- <https://stackoverflow.com/questions/4283731/plotting-package-for-c>

Here some (additional) links:

- [sciplot](#)
  - <https://sciplot.github.io/>
  - <https://github.com/sciplot/sciplot>
- [Matplot++](#)
  - <https://alandfreitas.github.io/matplotplusplus/>
  - <https://github.com/alandfreitas/matplotplusplus>
- [VTK](#)

- <https://github.com/thclark/cppplot>
- Matplotlib-Cpp - requires python
  - <https://github.com/lava/matplotlib-cpp>
- Immediate Mode Plotting (implot)
  - <https://github.com/epezent/implot>
  - Dear ImGui: <https://github.com/ocornut/imgui>

## Python

A python script/program allowing interactive commands is better suited for experimenting/development.

However, C++ developers might use python when compiling their code as python module with bindings, e.g. with [pybind11](#). Interface functions might utilize [numpy](#) or [Eigen](#), see <https://pybind11.readthedocs.io/en/stable/advanced/cast/eigen.html>

In python, there are several plot libraries available:

- Matplotlib
  - <https://matplotlib.org/>
  - <https://github.com/matplotlib/matplotlib>
- PyQtGraph - builds on Qt
  - <https://www.pyqtgraph.org/>
  - <https://github.com/pyqtgraph/pyqtgraph>
- seaborn
  - <https://seaborn.pydata.org/>
  - <https://github.com/mwaskom/seaborn>

i really like colored heatmaps:

- <https://stackoverflow.com/questions/33282368/plotting-a-2d-heatmap>
- <https://github.com/DingWB/PyComplexHeatmap>
- [https://matplotlib.org/stable/gallery/images\\_contours\\_and\\_fields/image\\_annotated\\_heatmap.html](https://matplotlib.org/stable/gallery/images_contours_and_fields/image_annotated_heatmap.html)
- [https://seaborn.pydata.org/examples/spreadsheet\\_heatmap.html](https://seaborn.pydata.org/examples/spreadsheet_heatmap.html)

## Colormaps

Colormaps are used for visualizing or mapping mostly linear or grayscale data. IMHO, `jet` is very appealing for linear or logarithmic data. matplotlibs' documentation shows many colormaps: <https://matplotlib.org/stable/tutorials/colors/colormaps.html>

From technical point of view, `turbo` is an improved alternative for `jet`, see <https://ai.googleblog.com/2019/08/turbo-improved-rainbow-colormap-for.html>

Other colormaps like `viridis`, `plasma` or `inferno` provide perceptually uniform sequential lightness.

Here an interesting video on this topic: <https://www.youtube.com/watch?v=xAoljeRJ3IU>

In SDR and signal processing, such colormaps are used to visualize the power (or energy) in one single pixel to allow [spectrogram](#) plots, which already use x and y axes for time and frequency. For sure, there are usages in many other fields.

## Cyclic colormaps

Circular data, e.g. phase values, should be treated special - as  $-180^\circ$  equals  $+180^\circ$ . *Cyclic* colormaps like *twilight* or *hsv* are for that case.

These colormaps are ideally viewed on circle like here:

<https://stackoverflow.com/questions/62531754/how-to-draw-a-hsv-color-wheel-using-matplotlib> - and not on a ruler.
